Head Injury Pathway for **Nursing Homes**

'Head injury' for the purposes of the guideline is defined as any trauma to the head, other than superficial injuries to the face.

NICE Clinical Guideline 56 2007 http://publications.nice.org.uk/head-injury-cg56

weeks after the bang to the head

same day

Where applicable this guidance must be read in conjunction with the Mental Capacity Act (2005), and any needs assessments, care planning and decisions must be considered in relation to this legal framework. **NICE Compliant 2007**

BOX 1 - Any focal neurological deficit since the injury examples include problems understanding, speaking, reading or writing; decreased sensation; loss of balance; general weakness; visual changes; abnormal reflexes; and problems walking).

BOX 2 - Any suspicion of a skull fracture or penetrating head injury since the injury (for example, clear fluid running from the ears or nose, black eye with no associated damage around the eyes, bleeding from one or both ears, new deafness in one or both ears, bruising behind one or both ears, penetrating injury signs, visible trauma to the scalp or skull of concern to the professional

Glasgow Coma Scale (GCS)

The Glasgow Coma Scale for adults

The Glasgow Coma Scale is scored between 3 and 15, 3 being the worst, and 15 the best. It comprises three parameters: best eye response, best verbal response, best motor response. The definition of these parameters is given below.

Best eye response (4)

- 1. No eye opening
- 2. Eye opening to pain
- 3. Eye opening to verbal command
- 4. Eyes open spontaneously

Best verbal response (5)

- 1. No verbal response
- 2. Incomprehensible sounds
- 3. Inappropriate words
- 4. Confused
- 5. Orientated

Best motor response (6)

- 1. No motor response
- 2. Extension to pain
- 3. Flexion to pain
- 4. Withdrawal from pain
- 5. Localising pain
- 6. Obeys commands
